PREFACE TO FIRST EDITION.

THE want of an introduction to the study of Old-English has long been felt. Vernon's Anglo-Saxon Guide was an admirable book for its time, but has long been completely antiquated. I was therefore obliged to make my Anglo-Saxon Reader a somewhat unsatisfactory compromise between an elementary primer and a manual for advanced students, but I always looked forward to producing a strictly elementary book like the present one, which would enable me to give the larger one a more scientific character, and would at the same time serve as an introduction to it. Meanwhile, however, Professor Earle has brought out his Book for the beginner in Anglo-Saxon. But this work is quite unsuited to serve as an introduction to my Reader. and will be found to differ so totally in plan and execution from the present one as to preclude all idea of rivalry on my part. We work on lines which instead of clashing can only diverge more and more.

My main principle has been to make the book the easiest possible introduction to the study of Old-English.

Poetry has been excluded, and a selection made from the easiest prose pieces I could find. Old-English original prose is unfortunately limited in extent, and the most suitable pieces (such as the voyages of Ohthere and Wulfstan) are already given in the Reader; these I could not give over

vi PREFACE.

again. But I hope the short extracts from the Chronicle and the Martyrdom of King Edmund will be found not wanting in interest. For the rest of the selections I have had to fall back on scriptural extracts, which have the great advantages of simplicity and familiarity of subject. The Gospel extracts have been transferred here from the Reader, where they will be omitted in the next edition. The sentences which head the selections have been gathered mainly from the Gospels, Ælfric's Homilies, and the Chronicle. They are all of the simplest possible character, only those having been taken which would bear isolation from their context. They are intended to serve both as an introduction and as a supplement to the longer pieces. They are grouped roughly into paragraphs, according to the grammatical forms they illustrate. Thus the first paragraph consists mainly of examples of the nominative singular of nouns and adjectives, the second of accusative singulars, and so on.

The spelling has been made rigorously uniform throughout on an early West-Saxon basis. Injurious as normalizing is to the advanced student, it is an absolute necessity for the beginner, who wants to have the definite results of scholarship laid before him, not the confused and fluctuating spellings which he cannot yet interpret intelligently. Even for purely scientific purposes we require a standard of comparison and classification, as in the arrangement of words in a dictionary, where we have to decide, for instance, whether to put the original of hear under \tilde{e} , $\tilde{i}e$, \tilde{i} or \tilde{y} . The spelling I here adopt is, in fact, the one I should recommend for dictionary purposes. From early West-Saxon it is an easy step both to late W. S. and to the Mercian forms from which Modern English is derived. That I give Ælfric in a spelling slightly earlier than his date is no more unreason-

able than it is for a classical scholar to print Ausonius (who doubtless spoke Latin with an almost Italian pronunciation) in the same spelling as Virgil.

It is impossible to go into details, but in doubtful or optional cases I have preferred those forms which seemed most instructive to the student. Thus I have preferred keeping up the distinction between the indic. bundon and the subj. bunden, although the latter is often levelled under the former even in early MS. In the accentuation I have for the present retained the conventional quantities, which are really 'prehistoric' quantities, as I have shown elsewhere (Phil. Soc. Proc. 1880, 1881). It is no use trying to disguise the fact that Old English philology (owing mainly to its neglect in its native land) is still in an unsettled state.

In the Grammar I have cut down the phonology to the narrowest limits, giving only what is necessary to enable the beginner to trace the connection of forms within the language itself. Derivation and syntax have been treated with the same fulness as the inflections. In my opinion, to give inflections without explaining their use is as absurd as it would be to teach the names of the different parts of a machine without explaining their use, and derivation is as much a fundamental element of a language as inflection. The grammar has been based throughout on the texts, from which all words and sentences given as examples have, as far as possible, been taken. This I consider absolutely essential in an elementary book. What is the use of a grammar which gives a number of forms and rules which the learner has no occasion to apply practically in his reading? Simply to cut down an ordinary grammar and prefix it to a selection of elementary texts, without any attempt to adapt them to one another, is a most unjustifiable proceeding.

In the Glossary cognate and root words are given only when they occur in the texts, or else are easily recognizable by the ordinary English reader.

All reference to cognate languages has been avoided. Of course, if the beginner knows German, the labour of learning Old English will be lightened for him by one half, but he does not require to have the analogies pointed out to him. The same applies to the relation between Old and Modern English. To trace the history of the sounds would be quite out of place in this book, and postulates a knowledge of the intermediate stages which the beginner cannot have.

The Notes consist chiefly of references to the Grammar, and are intended mainly for those who study without a teacher. As a general rule, no such references are given where the passage itself is quoted in the Grammar.

On the whole I do not think the book could be made much easier without defeating its object. Thus, instead of simply referring the student from signt to standan, and thence to the Grammar, I might have saved him all this trouble by putting 'signt, 3 sg. pres. of standan, stand,' but the result would be in many cases that he would not look at the Grammar at all—surely a most undesirable result.

Although I have given everything that I believe to be necessary, every teacher may, of course, at his own discretion add such further illustrations, linguistic, historical, antiquarian, or otherwise, as he thinks likely to instruct or interest his pupils.

My thanks are due to Professor Skeat, not only for constant advice and encouragement in planning and carrying out this work, but also for help in correcting the proofs.

In conclusion I may be allowed to express a hope that this little book may prove useful not only to young beginners, but also to some of our Professors of and Examiners in the English language, most of whom are now beginning to see the importance of a sound elementary knowledge of 'Anglo-Saxon'—a knowledge which I believe this book to be capable of imparting, if studied diligently, and not hurriedly cast aside for a more ambitious one.

PREFACE TO THIRD EDITION.

In the present edition I have put this book into what must be (for some time at least) its permanent form, making such additions and alterations as seemed necessary.

If I had any opportunity of teaching the language, I should no doubt have been able to introduce many other improvements; as it is, I have had to rely mainly on the suggestions and corrections kindly sent to me by various teachers and students who have used this book, among whom my especial thanks are due to the Rev. W. F. Moulton, of Cambridge, and Mr. C. Stoffel, of Amsterdam.

GRAMMAR.

THE oldest stage of English before the Norman Conquest is called 'Old English,' which name will be used throughout in this book, although the name 'Anglo-Saxon' is still often used.

There were several dialects of Old English. This book deals only with the West-Saxon dialect in its earliest form.

SOUNDS.

VOWELS.

The vowel-letters in Old English had nearly the same values as in Latin. Long vowels were occasionally marked by ('), short vowels being left unmarked. In this book long vowels are marked by ('). The following are the elementary vowels and diphthongs, with examples, and key-words from English, French (F.), and German (G.):—

٠\$٠	\mathbf{a}	as in	mann (G.)	nama (name).
110	ā	2)	father	stān (stone).
÷	æ	2)	man	glæd (<i>glad</i>).
٠,	æ	,,		dæd (deed)¹.
-	е	"	_été (F.)	ic ete 2 (I eat).
~	ē	27	see (G.)	hē (<i>he</i>).
74	,ę	"	men	menn (men).

¹ Where no key-word is given for a long vowel, it must be pronounced exactly like the corresponding short one, only lengthened.

² Both vowels.

i	as in	fini (F.)	cwic (alive).
ī	,,	sieh (G.)	win (wine).
ie	29	fin	ieldran (ancestors).
īе	"		hīeran (<i>hear</i>).
0	31	beau (F.)	god (god).
ō	,,	so (G.)	göd (good).
u	15	sou (F.)	sunu (son).
ū	,,	gut (G.)	nū (now).
y	77	vécu (F.)	synn (sin).
ÿ		grün (G.)	bryd (<i>bride</i>).
ea	=	æ+a	eall (all).
ēа	=	ē+a	ēast (east).
eo	=	e+0	weorc (work).
ēо	=	ē∔o	dēop (<i>deep</i>).

e and g are both written e in the MSS.

The diphthongs are pronounced with the stress on the first element.

Those who find a difficulty in learning strange vowel-sounds may adopt the following approximate pronunciation:—

eo = ĕ-o weorc (wĕ-ork), ēo = ai-o , dēop (dai-op),

The pronunciation given in parentheses is the nearest that can be expressed in English letters as pronounced in Southern English.

CONSONANTS.

Double consonants must be pronounced double, or long, as in Italian. Thus sunu (son) must be distinguished from sunne (sun) in the same way as penny is distinguished from penknife. So also in (in) must be distinguished from inn (house); noting that in modern English final consonants in accented monosyllables after a short vowel are long, our in and inn both having the pronunciation of Old English inn, not of O. E. in.

c and g had each a back (guttural) and a front (palatal) pron., which latter is in this book written \dot{c} , \dot{g} .

 $\mathbf{c} = k$, as in cene (bold), cnawan (know).

 $\hat{\mathbf{c}} = kj$, a k formed in the j (English y) position, nearly as in the old-fashioned pron. of sky: cirice (church), stycee (piece), pencan (think).

g initially and in the combination ng was pron. as in 'get': $g\bar{o}d$ (good), lang (long); otherwise (that is, medially and finally after vowels and l, r) as in German sagen: dagas (days), burg (city), $h\bar{a}lga$ (saint).

ġ initially and in the combination nġ was pronounced gj (corresponding to kỳ): ġē (ye), ġeorn (willing), sprenġan (scatter); otherwise = j (as in 'you'): dæġ (day), wrēġan (accuse), herġian (ravage). It is possible that ġ in ġe-boren (born) and other unaccented syllables was already pronounced j. ċġ = ġġ: seċġan (say), hryċġ (back).

f had the sound of v everywhere where it was possible:—
faran (go), of (of), ofer (over); not, of course, in oft (often),
or when doubled, as in offrian (offer).

h initially, as in $h\bar{e}$ (he), had the same sound as now. Everywhere else it had that of Scotch and German ch in loch;— $h\bar{e}ah$ (high), Wealh (Welshman), riht right). hw, as in hwxt (what), $hw\bar{e}l$ (while), had the sound of our wh; and hl, hn, hr differed from l, n, r respectively precisely as wh differs from w, that is, they were these consonants devocalized, hl being nearly the same as Welsh $ll:-hl\bar{u}ford$ (lord), $hl\bar{u}d$ (loud); hnappian (doze), hnulu (nut); hrape (quickly), $hr\bar{e}od$ (reed).

r was always a strong trill, as in Scotch:— $r\bar{c}ran$ (to raise), $h\bar{e}r$ (here), word (word).

s had the sound of z:—sēčan (seek), sīvā (so), īvīs (wise), ārīsan (rise); not, of course, in combination with hard consonants, as in stān (stone), fæst (firm), rīčsian (rule), or when double, as in cyssan (kiss).

) had the sound of our th (=dh) in then:— $\hbar\bar{u}$ (thou), hing (thing), $s\bar{o}h$ (true), $\hbar\bar{a}h$ en (heathen); except when in combination with hard consonants, where it had that of our th in thin, as in $s\bar{c}eh$ (seeks). Note $\hbar afh$ (has)= $\hbar avdh$.

w was fully pronounced wherever written:—wrītan (write), nīwe (new), sēow (sowed pret.).

STRESS.

The stress or accent is marked throughout in this book, whenever it is not on the first syllable of a word, by (') preceding the letter on which the stress begins. Thus for giefan is pronounced with the same stress as that of forgive, and swaru with that of answer.

PHONOLOGY.

VOWELS.

Different vowels are related to one another in various ways in O. E., the most important of which are *mutation* (German *umlaut*) and *gradation* (G. *ablaut*).

The following changes are mutations:-

- a..e:—mann, pl. menn; wand (wound prl.), wendan (to turn).
 ea (=a) .. ie (=e):—eald (old), ieldra (older); feallan
- ea (=a)..ie (=e):—eald (old), ieldra (older); feallar (fall), fielp (falls).
- ā..ē:—blāwan (to blow), blæwp (bloweth); hāl (sound), hālan (heal).
- u. y:—burg (city), pl. byrig; trum (strong), trymman (to strengthen).
 - o.y:—gold, gylden (golden); coss (a kiss), cyssan (to kiss).
- o. i:—beran (to bear), bireh (beareth); cweban (speak), cwide (speech).
- eo (=e)..ie (=i):—heord (herd), hierde (shepherd); ceorsan (cut), ciersp (cuts).
 - u.o:—curon (they chose), gercoren (chosen).
- ũ ... ỹ:—cũp (known), cỹpan (to make known); fũl (foul), ã fỹlan (defile).
- ō...ō:—sōhte (sought pri.), sēċan (to seek); fōda (food), fēdan (to feed).
- ēa.. īe:—hēawan (to hew), hīewp (hews); tēam (progeny), tīeman (teem).
- ēo.. ie:—stēor (rudder), stieran (steer); ģe strēon (possession), ģes trienan (gain).

Before proceeding to gradation, it will be desirable to describe the other most important vowel-relations.

a, we, ea. In O.E. original a is preserved before nasals, as in mann, lang, nama (name), and before a single consonant followed by a, u, or o, as in dagas (days), dagum (to days), faran (go), gafol (profit), and in some words when e follows, as in ie fare (I go), faren (gone). Before r, l, h followed by another consonant, and before x it becomes ea, as in heard (hard), eall (all), eald (old), eahta (eight), weaxan (to grow). Not in barst (p. 7). In most other cases it becomes x : -dx = dx (day), dages (of a day), fast (firm), war (wary).

e before nasals always becomes *i*: compare bindan (to bind), pret. band, with beran (to bear), pret. bær.

e before r (generally followed by a consonant) becomes eo:—eorpe (earth), heorte (heart). Not in berstan (p. 7). Also in other cases:—seolfor (silver), heofon (heaven).

i before r + cons. becomes ie:-bierp (beareth) contr. from birep, hierde (shepherd) from heard (herd), wiersa (worse).

e before r, or l + cons. often becomes ie :-fierd (army) from faran, bieldo (boldness) from beald, ieldra (elder) from eald.

By gradation the vowels are related as follows:-

e (i, eo) . . a (æ, ea) . . u (o):--

bindan (inf.), band (pret.), bundon (they bound). beran (inf.), bær (pret.), boren (past partic.). ceorfan (cut), cearf (pret.), curfon (they cut), corfen (past partic.). bend (bond)=mutation of band, byr-ben (burden) of bor-en.

a (æ, ca).. æ:—spræc (spoke), spræcon (they spoke), spræc (speech).

a...ō:—faran (to go), for (pret.), for (journey). gerfera (companion) mutation of for.

ī. ā. i:—wrītan, wrāt, writon, ģewrit (writing, subst.). (be) līfan (remain), lāf (remains), whence by mutation lāfan (leave).

ēo (ū).. ēa.. u (o):—ċēosan (choose), ċēas, curon, coren. cys-t (choice). (for)·lēosan (lose), lēas (loose), ā·līesan (release), losian (to be lost). būgan (bend), boga (bow).

We see that the laws of gradation are most clearly shown in the conjugation of the strong verbs. But they run through the whole language, and a knowledge of the laws of gradation and mutation is the main key to O.E. etymology.

It is often necessary to supply intermediate stages in connecting two words. Thus leègan (lay) cannot be directly referred to liegan_(lie), but only to a form *lag-, preserved in the preterite læg. So also lbendan (to blind) can be referred only indirectly to the adjective blind through an intermediate *bland-. Again, the root-vowel of byrpen

(burden) cannot be explained by the infinitive beran (bear), but only by the past participle gerboren. In the same way hrpre (fall sb.) must be referred, not to the infinitive hreosan, but to the preterite plural hruron.

The vowel-changes in the preterites of verbs of the 'fall'-conjugation (1) feallan, feoll, &c., are due not to gradation, but to other causes.

CONSONANTS.

s becomes r in the preterite plurals and past participles of strong verbs, as in *curon*, *gecoren* from *cēosan*, $w\bar{w}ron$ pl. of $w\bar{w}s$ (was), and in other formations, such as *hryre* (fall) from *hrēosan*.

p becomes d under the same conditions, as in wurden, gerworden from weerhan (become), cwah (quoth), pl. cwāden, cwide (speech) from cwehan (infin.).

r is often transposed, as in *iernan* (run) from original *rinnan (cp. the subst. ryne), berstan (burst) from *brestan, bærst (burst pret.) from bræst, hors (horse) from *hross.

The combinations ex-, gx- become cea-, gea-, as in ceaf (chaff) from *cxf, sceal (shall) from *scxl, geaf (gave)=*gxf from giefan (cp. cwxp from cwcpan), geat (gate)—cp. fxt (vessel).

gæ- often becomes ġēa-, as in ġēafon (they gave), with which compare cwādon (they said).

ge- becomes gie, as in giefan, gieldan (pay) from *gefan, *geldan—cp. cweþan, delfan. Not in the prefix ge- and gē (ye).

When g comes before a consonant in inflection, it often becomes h, as in hē līehb (he lies) from lēogan (mentiri).

h after a consonant is dropt when a vowel follows, the preceding vowel being lengthened, thus Wealh (Welshman) has plural Wēalas.

INFLECTIONS.

NOUNS.

Gender. There are three genders in O.E.—masculine, neuter, and feminine. The gender is partly natural, partly

grammatical. By the natural gender names of male beings, such as se mann (the man), are masculine; of female beings, such as seo dohtor (the daughter), are feminine; and of young creatures, such as pæt cild (the child), neuter. Note, however, that pæt wif (woman) is neuter.

Grammatical gender is known only by the gender of the article and other words connected with the noun, and, to some extent, by its form. Thus all nouns ending in -a, such as se mona (moon), are masculine, seo sunne (sun) being feminine. Those ending in -dom, -had, and -stipe are also masculine:—se wisdom (wisdom), se tildhad (childhood), se freondstipe (friendship). Those in -nes, -o (from adjectives) -roden, and -ung are feminine:—seo rihtwisnes (righteousness), seo bieldo (boldness) from beald, seo mann-roden (allegiance), seo scotung (shooting).

Compounds follow the gender of their last element, as in pat burg-geat (city-gate), from seo burg and pat geat. Hence also se wif-mann (woman) is masculine.

The gender of most words can be learnt only by practice, and the student should learn each noun with its proper definite article.

Strong and Weak. Weak nouns are those which form their inflections with n, such as se $m\bar{o}na$, plural $m\bar{o}nan$; sēo sunne, genitive sing. $b\bar{c}e$ sunnan. All the others, such as se $d\alpha\dot{g}$, pl. dagas, $b\alpha\dot{e}t$ $b\bar{u}s$ (house), gén. sing. $b\alpha\dot{s}$ $b\alpha\dot{s}$, are strong.

Cases. There are four cases, nominative, accusative, dative, and genitive. The acc. is the same as the nom. in all plurals, in the sing. of all neuter nouns, and of all strong masculines. Masculine and neuter nouns never differ in the plural except in the nom. and acc., and in the singular they differ only in the acc. of weak nouns, which in neuters is the same as the nom. The dative plural of nearly all nouns ends in -um.

STRONG MASCULINES.

(1) as-plurals.

	SI	NGULAR.	PLU	RAL.
,	Nom 1.	stăn (sione).	Nom.	stān-as,
	Dat.	stān-e.	Dat.	stān-um.
l	Gen.	stān-es.	Gen.	stān-a.

So also dæl (part), cyning (king), cildhad (childhood).

dag (day) changes its vowel in the pl. (p. 5):—dæg, dæge, dæges; dagas, dagum, daga.

Nouns in -e have nom. and dat. sing. the same:—¿nde, (end), ¿nde, ¿ndes; ¿ndas, ¿ndum, ¿nda.

Nouns in -el, -ol, -um, -en, -on, -er, -or often contract: engel (angel), engle, engles; englas, englum, engla. So also nægel (nail), begen (thane), ealdor (prince). Others, such as æcer (field), do not contract.

h after a consonant is dropped in inflection (p. 7), as in feorh (life), feore, feores. So also in Wealh (Welshman), plur. Wealas.

There are other classes which are represented only by a few nouns each.

(2) e-plurals.

A few nouns which occur only in the plur.:—lēode (people), lēodum, lēoda. So also several names of nations:—Engle (English), Dene (Danes); Seaxe (Saxons), Mierēe (Mercians), have gen. plur. Seaxua, Mierēna.

(3) Mutation-plurals.

SINGULAR.			PLURAL,		
Nom.	fot (foot).		Nom.	fēt.	
Dat.	fēt.	-	Dat.	fot-um.	
Gen.	főt-es.		Gen.	ſōt∙a.	

So also top (tooth). Mann (man), menn, mannes; menn, mannum, manna.

Wherever the acc. is not given separately, it is the same as the nom.

(4) u-nouns.

SINGULAR. PLURAL.

Nom. sun-u (son). Nom. sun-a.

Dat. sun-a. Dat. sun-um.

Gen. sun-a. Gen. sun-a.

So also wudu (wood).

(5) r-nouns (including feminines).

SINGULAR. PLURAL.

Nom. mōdor (mother). Nom. mōdor.

Dat. mēder. Dat. mōdr-um.

Gen. mōdor. Gen. mōdr-a.

So also bropper (brother); fader (father), dohter (daughter), have dat. sing. fader, dehter.

(6) nd-nouns.

Formed from the present participle of verbs.

SINGULAR. PLURAL.

Nom. frēond (friend). Nom. friend.

Dat. friend. Dat. frēond-um.

Gen. frēond-es. Gen. frēond-a.

So also feond (enemy).

Those in -end inflect thus:—būend (dweller), būend, būendes; būend, būendum, būendra. So also Hālend (saviour). The -ra is an adjectival inflection.

STRONG NEUTERS.

· (1) u-plurals.

SINGULAR.

Nom. scip (ship). Nom. scip-u.

Dat. scip-e.

Gen. scip-es.

Gen. scip-es.

Plura'l.

Nom. scip-u.

Dat. scip-um.

Gen. scip-a.

So all neuters with short final syllable, such as *getbed* (prayer), *gewrit* (writing), *geat* (gate).

Fæt (vessel), fæte, fætes; fatu, fatum, fata (p. 5).

Rice (kingdom), rice, rices; ricu, ricum, rica. So also all neuters in e, except heorie and eare (p. 13): ge peode (language), styce (piece).

Those in -ol, -cn, -or, &c. are generally contracted:—deofol (devil), deofics, deofiu. So also wapen (weapon), mynster (monastery), wunder (wonder).

(2) Unchanged plurals.

SI	NGULAR.	PLURAL.		
Nom.	hūs (house).	Nom.	hūs.	
Dat.	hūs-e.	Dat.	hūs-um.	
Gen.	hūs-es.	Gen.	hūs-a.	

So all others with long final syllables (that is, containing a long vowel, or a short vowel followed by more than one consonant), such as bearn (child), folc (nation), wif (woman).

Feoh (money) drops its h in inflection and lengthens the co:—feoh, feo, feos. So also blech (colour).

PROPER NAMES.

Native names of persons are declined like other nouns:— Ælfred, gen. Ælfredes, dat. Ælfrede; Ēad-burg (fem.), gen. Ēadburge, &c.

Foreign names of persons sometimes follow the analogy of native names, thus Crīst, Salomon have gen. Crīstes, Salomones, dat. Crīste, Salomone. Sometimes they are declined as in Latin, especially those in -us, but often with a mixture of English endings, and the Latin endings are used

somewhat loosely, the accus. ending being often extended to the other oblique cases; thus we find nom. Cyrus, gen. Cyrus, acc. Cyrum, dat. Cyrum (pæm cyninge Cyrum).

Almost the only names of countries and districts in Old English are those taken from Latin, such as Breten (Britain), Cent (Kent), Germānia (Germany), and those formed by composition, generally with land, such as Engla-land (land of the English, England), Israhēla-þēod (Israel). In both of these cases the first element is in the gen. pl., but ordinary compounds, such as Scot-land, also occur. In other cases the name of the inhabitants of a country is used for the country itself:—on East-englum=in East-anglia, lit. 'among the East-anglians.' So also on Angel-cynne=in England, lit. 'among the English race,' more accurately expressed by Angelcynnes land.

Uncompounded names of countries are sometimes undeclined. Thus we find on Cent, to Hierusalem.

Germānia, Asia, and other foreign names in -a take -e in the oblique cases, thus gen. Germānie.

ADJECTIVES.

Adjectives have three genders, and the same cases as mouns, though with partly different endings, together with strong and weak inflection. In the masc and neut sing they have an *instrumental* case, for which in the fem. and plur., and in the weak inflection the dative is used.

STRONG ADJECTIVES.

Adjectives with a short syllable before the endings take in the fem. sing. nom. and neut. pl. nom., those with a long one drop it.

Those in -e, such as blipe (glad), drop it in all inflections:—blipne, blipne, blipre.

Those in -ig, -el, -ol, -en, -er, -or often contract before inflections beginning with a vowel, as in hāliġ (holy), hālges, hālgum; miċel (great), miċlu, miċle. Not, of course, before consonants:—hāliġne, miċelne, miċelra.

Those in -u, such as *gearu* (ready), change the u into a w before vowels:—*gearwes*, *gearwe*.

Adjectives with long syllable before the endings drop the u of the fem. and neuter:—

Hēah (high) drops its second h in inflection and contracts:—hēare, nom. pl. hēa, dat. hēam, acc. sing. masc. hēanne.

Fela (many) is indeclinable.

COMPARISON.

The comparative is formed by adding -ra, and is declined like a weak adjective:—lēof (dear), lēofra masc., lēofre fem., lēofran plur., etc.; māre (famous), mārra. The superlative is formed by adding -ost, and may be either weak or strong:—lēofost (dearest).

The following form their comparisons with mutation, with superlative in -est (the forms in parentheses are adverbs):—

eald (old),	ieldra,	ieldest.
lang (long),	lęnġra	lęnģest.
nëah (near),	(nēar),	nïehst.

The following show different roots:-

The others up to twentig are generally indeclinable. Those in -tig are sometimes declined like neuter nouns, sometimes like adjectives, and are often left undeclined. When not made into adjectives they govern the genitive.

Hund and busend are either declined as neuters or left undeclined, always taking a genitive :- eahta hund mīla (eight hundred miles), feower pusend wera (four thousand men).

Units are always put before tens:—ān and twentig (twentyone).

The ordinals are always weak, except $\bar{o}per$, which is always strong.

POSSESSIVE.

Min (my), bin (thy), ure (our), cower (your), and the dual uncer and incer are declined like other adjectives. The genitives his (his, its), hiere (her), hiera (their) are used as indeclinable possessives.

Other demonstratives, which are used both as nouns and as adjectives, are serica (same), which is always weak, sepele (such), which is always strong.

RELATIVE.

The regular relative is the indeclinable pe, as in $\overline{e}lc$ para pe pas $m\bar{i}n$ word ge $h\bar{i}erp$ (each of those who hears these my words). It is often combined with $s\bar{e}$, which is declined:— $s\bar{e}$ pe = who, masc., $s\bar{e}o$ pe, fem., &c. $S\bar{e}$ alone is also used as a relative:— $h\bar{e}r$ is $m\bar{i}n$ enapa, pone ie ge $e\bar{e}as$ (here is my servant, whom I have chosen); sometimes in the sense of 'he who':— $h\bar{e}r$ $p\bar{u}$ harfst pai $p\bar{i}n$ is (here thou hast that which is thine).

INDEFINITE.

Indefinites are formed with swā and the interrogative pronouns, thus:—swā hwā swā, swā hwelc swā (whoever), swā hwæl swā (whatever), $\bar{A}n$ and sum (some) are used in an indefinite sense:— $\bar{a}n$ mann, sum mann='a certain man,' hence 'a man.' But the indefinite article is generally not expressed.

 $\tilde{\mathcal{A}}$ lc (each), \tilde{e} ni \dot{g} (any), $n\tilde{e}$ ni \dot{g} (no, none), are declined like other adjectives.

Ōper (other) is always strong:—pā öpre menn.

Man, another form of mann, is often used in the indefinite sense of 'one,' French on:—his brobor Horsan man of slog (they killed his brother Horsa).

VERBS.

There are two classes of verbs in O. E., strong and weak. The conjugation of strong verbs is effected mainly by means of vowel-gradation, that of weak verbs by the addition of d (-ode, -ede, -de) to the root-syllable.

The following is the conjugation of the strong verb bindan (bind), which will serve to show the endings which are common to all verbs:—

INDICATIVE.	SUBJUNCTIVE.
Pres. sing. 1. bind-e,	bind-e.
2. bind-est, bintst,	bind-e.
3. bind-eþ, bint,	bind-e.
plur. bind-ap,	bind-en.
Pret. sing. 1. band,	bund-e.
2. bund-e,	bund-e.
3. band,	bund-e.
plur. bund-on,	bund-en.
nper. sing. bind; plur. bind-ap.	Infin. bind-ar

Gerund, to bind-enne.

For the plural bindab, both indicative and imperative, binde is used when the personal pronoun follows immediately after

Partic. pres. bind-ende; pret. ge-bund-en.

the verb:—wē bindaþ (we bind), but binde wē (let us bind); so also gāþ / (go plur.), but gā ģē / (go ye).

The present participle may be declined like an adjective. Its declension when used as a noun is given above, p. 10.

The past participle generally prefixes $\dot{g}e$, as in $\dot{g}e$ bunden, $\dot{g}e$ numen from niman (take), unless the other parts of the verbs have it already, as in $\dot{g}e$ hieran (hear), $\dot{g}e$ hiered. It is sometimes prefixed to other parts of the verb as well. No $\dot{g}e$ is added if the verb has another prefix, such as \bar{a} -, be-, for-; thus for \dot{g} iefan (forgive) has the past participle for \dot{g} iefen. The past participle may be declined like an adjective.

Traces of an older passive voice are preserved in the form hāt-te from hātan (call, name), which is both present 'is called,' and preterite 'was called':—se munuc hātte Abbo (the monk's name was Abbo).

STRONG VERBS.

In the strong verbs the plural of the pret. indic. generally has a different vowel from that of the sing. (ic band, $w\bar{e}$ bundon). The 2nd sing. pret. indic. and the whole pret. subj. always have the vowel of the preterite plural indicative ($b\bar{u}$ bunde, ic bunde, $w\bar{e}$ bunden.)

The 2nd and 3rd persons sing. of the pres. indic. often mutate the root-vowel, thus:—

1	a <i>66</i>	contes	ę a	s in (hē)	stent	from	standan (stand).
	ea	,,	ie	,,	fielþ		feallan (fall).
	е	,,	i	,,	cwipp	"	cwepan (say).
,	eo	"	ie))	wierb	"	weorpan (happen)
1	ā	> >	æ	,,	hætt	,,	hātan (command).
,	õ	"	ē	3 3	grēwþ	,,	grõwan (<i>grow</i>).
į	ēa	,,	ĩe	,,	hiewþ	22	hēawan (<i>hew</i>).
į	ēο	"	īе	,,	ċĭest	,,	čeosan (choose).
	ū	3)	ÿ	,,	lÿcþ	27	lūcan (close).

The full ending of the 3rd pers. sing. pres. indic. is -eh, which is generally contracted, with the following consonant-changes:—

```
-teb becomes -tt as in lætt from lætan (let).
                             bīdan (waii).
           -tt "
                   bītt
-deb
                        "
                             biddan (pray).
-ddeb
           -tt ,, bitt
                        ,,
                             cweban (say).
-þeþ
       " -bb " cwibb "
           -st " čiest "
                             čeosan (choose).
-seþ
       99
          -nt " bint
                             bindan (bind).
-ndeþ
```

Double consonants become single, as in $h\bar{e}$ fielly from feallan.

Before the -st of the 2nd pers. consonants are often dropt, as in $b\bar{u}$ cwist from cweban, $b\bar{u}$ criest from $c\bar{c}e\bar{s}an$; and d becomes t, as in $b\bar{u}$ bintst from bindan.

For the changes between s and r, p and d, g and h, see p. 7.

Some verbs, such as $s\bar{e}on$ (see), drop the h and contract before most inflections beginning with a vowel:—ic $s\bar{e}o$, $w\bar{e}$ $s\bar{e}o\bar{p}$, $t\bar{o}$ $s\bar{e}onne$; but $h\bar{e}$ $sih\bar{p}$.

There are seven conjugations of strong verbs, distinguished mainly by the different formation of their preterites. The following lists comprise all the strong verbs that occur in the texts given in this book, together with several others of the commoner ones.

I. 'Fall'-conjugation.

The pret. sing. and pl. has $\bar{e}o$ or \bar{e} , and the past partic. retains the original vowel of the infinitive.

WEAK VERBS.

There are three conjugations of weak verbs—(1) in -an, pret. -de (hīeran, hīerde, 'hear'); (2) in -ian, pret. -ede (wenian, wenede, 'wean'); (3) in -ian, pret. -ode (lufian, lufode, 'love'). The verbs of the first two conjugations nearly all have a mutated vowel in the present and infinitive, which those of the third conjugation very seldom have.

I. an-verbs.

This class of weak verbs has the same endings as the strong verbs, except in the pret and past partic, which are formed by adding -de and -ed respectively, with the following consonant changes.

-ndde becomes -nde as in sende from sendan (send). fyllan (fill). -lde " fylde " -llde " mētte " mētan (find). -tde -tte " dypte " dyppan (dip). -pde -pte " tæhte tæcan (show). -cde -hte 33

The past partic. is generally contracted in the same way:—send, mētt, tæht, but some of them often retain the uncontracted forms:—fylled, dypped. When declined like adjectives they drop their e where practicable:—fylled, plur. fylde; hīered, hīerde.

The 2nd and 3rd pres. sing. ind. are contracted as in the strong verbs.

(a) 'Hear'-class.

INDICATIVE.			SUBJUNCTIVE.
Pres. sing.	ı.	hīer-e (<i>hear</i>),	hīer-e.
	2.	hīer-st,	hīer-e.

(b) 'Seek'-class.

In this class the mutated vowels lose their mutation in the preterite and past partic., besides undergoing other changes in some verbs.

Those in double consonants (and eg) simplify them in the contracted and and 3rd sing. pres. indic.:—selle, selst, sell; seege, segst, segh; also in the imperative, which is formed as in Conj. II:—sele, sege, byge, &c.

Partic. pres. luf-iende: pret. luf-od. Gerund. to luf-ienne.

So also ascian (ask), macian (make), weorpian (honour), and many others.

Irregularities.

Some verbs are conjugated partly after I, partly after III. Such are habban (have) and hibban (live).

Habban has pres. indic. hæbbe, hæfst, hæfþ; habbaþ, subj. hæbbe, hæbben, pret. hæfde, imper. hafa, habbaþ, particc. habbende, hæfd.

Libban has pres. libbe, leofast, leofap; libbah, subj. libbe, pret, leofode, imper. leofa, libbah, partice. libbende, lifiende; leofod.

Fetian (fetch) has pret. fette.

STRONG-WEAK VERBS.

The strong-weak verbs have for their presents old strong preterites, from which new weak preterites are formed. Note the occasional second person sing. in t.

INDICATIVE.			SUBJUNCTIVE

Imper. gā, gāp. Infin. gān.
Partic. pres. gangende; pret. ģe gān.

DERIVATION.

PREFIXES.

The following are the most important prefixes, some of which are *verbal*, being confined to verbs and words formed directly from them; some nominal, being confined to nouns and adjectives.

- ā-(1) originally 'forth,' 'away,' as in ā'rīsan, 'rise forth,' 'arise'; ā'faran, 'go away,' 'depart'; but generally only intensitive, as in ā'cwellan (kill), ā'hrēosan (fall).
- (2)=' ever' in pronouns and particles, where it gives an indefinite sense, as in ā-hwār (anywhere), ā-wiht (anything).
- æg-from \bar{a} -ge-, the \bar{a} being mutated and the e dropped, has a similar meaning, as in $\bar{a}g$ -hwele (each), $\bar{a}g$ -her= $\bar{a}g$ -hweher (either).

be-, originally 'by,' 'around' (cp. the preposition be), (1) specializes the meaning of a transitive verb, as in be setian (beset, surround), be scieran (shear); (2) makes an intransitive verb transitive, as in be pencan (consider) from pencan (think); (3) gives a privative meaning, as in be heafdian (behead). In some words, such as be cuman (come), it is practically unmeaning.

<u>for</u>- (which is distinct from the preposition for) generally has the sense of 'loss' or 'destruction,' as in for don (destroy), for wear han (perish). Of course, if the verb with which it is compounded already has this meaning, it acts merely as an intensitive, as in for break up, break), for scrincan (shrink up). It also modifies in a bad sense generally, as in for seon (despise), or negatives, as in for bedan (forbid).

ge- originally meant 'together,' as in gefera (fellow-traveller, companion) from feran (travel). With verbs it often signifies 'completion,' 'attainment,' and hence 'success,' as in gegān (conquer), originally 'go over,' or 'reach,' gewinnan (win) from winnan (fight). Hence generally prefixed to hieran and seon, gehieran and geseon strictly meaning 'succeed in hearing, seeing.' It is generally prefixed to past participles (p. 23), where it originally gave the meaning of completion—gelufod='completely loved.'

mis-='mis,' as in mis-dad (misdeed).

n-=ne (not), as in $n\bar{a}$ (not), literally 'never,' $n\bar{\omega}fre$ (never), $n\bar{\omega}s$ (was not)=ne $w\bar{\omega}s$.

__on- as a verbal prefix has nothing to do with the preposition on. It properly signifies 'separation,' as in on'lūcan (open) from lūcan (lock, close), but is often practically unmeaning, as in onginnan (begin).

or-, literally 'out of,' is privative, as in orsorg (unconcerned) from sorg. (sorrow).

tō- as a verbal prefix has nothing to do with the preposition tō (which occurs in tō gædre, 'together,' &c.), but signifies 'separation,' as in tō berstan (burst asunder), tō bregdan (shake off), and hence 'destruction,' as in tō cwīesan (crush to pieces, bruise).

un- negatives, as in un-gesælig (unhappy).

ENDINGS.

(a) Nouns.

Personal.

-end, from the present participle -ende,='-er':-Hælend (healer, Saviour), buend (dweller).

-ere='-er':—sāwere (sower), mynetere (money-changer, minter) from mynet (coin).

-ing, patronymic, abeling (son of a noble, prince) from abele (noble).

Abstract.

-nes, fem. from adjectives:—god-nes (goodness), rihtwis-nes (righteousness).

-uþ, -þo, fem., generally from adjectives:—ġēoguþ (youth), strengho (strength) from strang.

-ung, fem. from verbs:—scotung (shooting, shot), hergung (ravaging), from scotian, hergian.

The following are also independent words:-

-dom, masc.: -wis-dom (wisdom), peow-dom (servitude).

-hād, masc.:—cild-hād (childhood).

-ræden, fem.:—ġe·cwid-ræden (agreement) from cwide (speech); mann-ræden (allegiance).

-scipe, masc.:—freond-scipe (friendship). Concrete in water-scipe (piece of water, water).

(b) Adjectives.

-en, with mutation, denotes 'material,' 'belonging to':—gylden (golden), stænen (of stone), hæþen (heathen) from hæþ (heath). In seoleen (silken) there is no mutation.

-feald='-fold':-hund-feald (hundred-fold).

-iġ:-miht-iġ (mighty); hāl-iġ (holy) from hāl (whole).

-isc, with mutation :— English (English) from Angel; menn-isc (human) from mann.

-ol :--szvic-ol (deceitful).

-iht, with mutation, denotes 'material,' 'nature':--stæn-iht (stony).

-sum='some':- hier-sum (obedient).

The following exist (sometimes in a different form) as independent words:—

-fæst:-sōb-fæst (truthful).

-full :--sorg-full (sorrowful), ge leaf-full (believing, pious).

-leas='-less':- ar-leas (dishonoured, wicked).

-lie (cp. ge·lie) = '-ly':-fole-lie (popular), heofon-lie (heavenly).

-weard='-ward':-supan-weard (southward).

VERBS.

-læcan :---an-læcan (unite), gerþvvær-læcan (agree).

Adverbs.

-e, the regular adverb-termination:—lange (long), gelice (similarly) from lang, gelic, Sometimes -lice (from -lic) is used to form adverbs, as blipe-lice (gladly) from blipe.

DERIVATIONS FROM PARTICIPLES.

Many abstract words are formed from present participles (often in a passive sense) and past participles (often in an active sense):—

-nes:—for giefen-nes (forgiveness), gereced-nes (narrative), welwillend-nes (benevolence).

-lie: -unārīmed-lie (innumerable).

-lice :-- ruclwillend-lice (benevolently).

SYNTAX.

GENDER.

When masculine and feminine beings are referred to by the same adjective or pronoun, the adjective or pronoun is put in the neuter:—hie ge samnodon hie, calle hā hēafod-menn, and ēac swelce wif-menn.. and hā hie blihost wāron.. (they gathered themselves, all the chief men, and also women.. and when they were most merry..). Here blihost is in the neuter plur.

CASES.

Accusative. Some verbs of asking (a question) and requesting, together with $l\bar{\alpha}ran$ (teach), take two accusatives, one of the person, and another of the thing:— $h\bar{\imath}e$ hine ne dorston $\bar{\alpha}nig$ ping $\bar{a}scian$ (they durst not ask him anything); $v\bar{\nu}e$ magon $\bar{e}ov$ $r\bar{\alpha}d$ ge $l\bar{\alpha}ran$ (we can teach you a plan).

The accusative is used adverbially to express duration of time: hwy stande ge her calne dag idle? (why stand ye here all the day idle?)

Dative. The dative in Old E. is of two kinds, (1) the dative proper, and (2) the instrumental dative, interchanging with the regular instrumental. It is not always easy to separate the two.

(1) The dative proper usually designates personal relations, and is frequently used with verbs, together with an accusative (generally of the thing). The dative is also used with adjectives. It is used not only with verbs of giving, &c., as in hē sealde ælcum ānne pening (he gave each a penny); addressing, as in ic ēvu seige (I say to you), hē pancode his Dryhtne (he thanked his Lord); but also with many verbs of benefiting, influencing, &c., as in ne dō ic pē nānne tēonan (I do thee no injury), hīe noldon him līefan (they would not allow

them to do so); hām rēhum stierde (restrained the cruel ones). Also in looser constructions, to denote the person indirectly affected, benefited, &c., as in byēġah ēow ele (buy for yourselves oil). Note especially the following idiom: hīe ġe sōhton Bretene Brettum tō fultume (they came to Britain as a help to the Britains—to help them); hē clipode Crīst him tō fultume (he called Christ to his help).

The dative is also used with adjectives of nearness, likeness, &c.:—Ēadmund cyning clipode ānne biscop pe him ģe hendost was (King Edmund summoned a bishop who was nearest at hand to him); heofona rīce is ģe līc pām mangere pe sāhte pat gāde meregrot (the kingdom of the heavens is like the merchant who sought the good pearl).

(2) The instrumental dative is used to denote the instrument and manner of an action: hē ģe endode yflum dēape (he ended with an evil death). Hence its use to form adverbs, as in stēafmālum (sheafwise). It also signifies time when:—prim ģēarum ār pām pe hē forpfērde (three years before he died), which is also expressed by the instrumental itself:—sēo wolde efsian ālee ģēare pone sanct (she used to cut the saint's hair every year); py fēorpan ģēare his rīces (in the fourth year of his reign). A past participle with a noun in the instrumental dative is used like the ablative absolute in Latin: Hubba be lāf on Norphymbra-lande, ģe wunnenum sige mid walhrēownesse (H. remained in Northumbria, victory having been won with cruelty).

Genitive. The genitive is often used in a partitive sense:—
his feonda sum (one of his enemies); hiera fif waron dysige
(five of them were foolish). Hence it is generally used with
fela, as in fela wundra (many miracles); also with numerals
when used as substantives (p. 18).

The genitive is often used like an accusative to denote the object of various emotions and mental states, such as joy, desire, remembering:—hie has fagnodon swihe (they rejoiced at it greatly); mê léofre ware hat ic on gefeohte feolle wih ham he min folc moste hiera eardes brûcan (it would be pleasanter to me to fall in fight that my people might enjoy (possess) their country); ic has gewilnige (I desire that); gif he his feores rohte (if he cared about his life); he was has Halendes gewyndig (he was mindful of —he remembered the Saviour).

Some of these verbs, such as biddan (ask), take an accusative of the person and a genitive of the thing:—hē hine hlāfes bitt (he asks him for bread).

Verbs of depriving, restraining, &c., have the same construction:—nis Angel-cynn bedæled Dryhtnes halgena (England is not deprived of the Lord's saints).

Some verbs of giving, &c., take a genitive of the thing and a dative of the person:—him was of logen ælces fodan (they were deprived of all food).

The genitive is often used to define an adjective or noun:—

pū eart wierhe slęges (thou art worthy of death); on pām gēare

he Ælfred æheling ān and twentig gēard wæs (in the year

when Prince Alfred was twenty-one).

CONCORD.

Adjectives agree with their nouns not only when used attributively (gode menn), but also when the adjective follows the noun, either predicatively or in apposition:—hā menn sind gode; hē ge seah ohre idle standan (he saw others standing idle); hīe comon mid langum scipum, nā manigum (they came with long ships, not many).

APPOSITION.

In such expressions as 'the island of Britain,' the second noun is not put in the genitive, but the two are simply put in .

apposition, both being declined separately:—Breten regland, on Bretene (pæm) reglande. In 'king Alfred,' &c., the proper name is put first in the same way:—Ælfred æpeling (prince Alfred); on Æpelredes cyninges dæge (in the days of king Æpelred).

There is a similar apposition with the adjective sum followed by a noun or pronoun, as in sume $b\bar{a}$ menn (some of the men); $b\bar{a}$ $b\bar{a}$ $b\bar{a}$ $b\bar{c}$ sow, sumu hie feollon wib weg (while he sowed, some of them [the seeds] fell by the road). Sometimes the pronoun precedes, as in $b\bar{a}$ $b\bar{c}\bar{c}$ don hie sume bæt Samson möste him macian sum gamen (then some of them asked that Samson might make some sport for them).

Another kind of apposition occurs in instances like the following, where we have an adjective agreeing with a following noun, and denoting a part of it:—hīe ģe sāton sūpanwearde Bretene ārest (they occupied the south of Britain first); sūpanweard hit (=pæt land) hæfdon Peohtas (the Picts had the south part of it).

ADJECTIVES.

The weak forms are used:

- (1) after the definite article:—se æpela cyning (the noble king); þæs æpelan cyninges, þæl göde meregrol, þā gödan meregrolu.
- (2) after pis:—pās earman landlēode (these poor people, pl.); pes hālga cyning (this holy king), pisses hālgan cyninges.
- (3) occasionally after other demonstrative and indefinite adjectives, and often after possessive pronouns:—*pīne dīeglan gold-hordas* (thy hidden treasures).
- (4) in the vocative:— pū yfla pēow and slāwa! (thou bad and slothful servant); ēalā pū lēofa cyning! oh, thou dear king).

Note that oper aiways keeps the strong form: $b\bar{a}$ open deor (the other wild beasts). So also do the possessive pronouns:

 $b\bar{a}s$ $m\bar{i}n$ word (these my words). $\bar{A}n$ in the sense of 'one' keeps the strong form to distinguish it from the weak $\bar{a}na$ = 'alone': bat an $d\bar{e}orwier be$ mergerot (the one precious pearl).

ARTICLES.

The definite article is omitted as in Modern English before names such as God, and also before Dryhten (the Lord), Dēofol (the Devil), although se Dēofol also occurs, and names of nations:—Bretta cyning (king of the Britons).

It is omitted in many prepositional combinations; not only in those where it is omitted in Modern English also, as in sigefast on sā and on lande (victorious on sea and on land), but also in many others: gewende tō wuda ongēan (went back to the wood); se flothere fērde eft tō scipe (the army of pirates went back to their ships); hē fēng tō rīce (he took the government—came to the throne).

The definite article is, on the other hand, sometimes used where it would not be in Modern E., as in se mann='man' (men in general).

The indefinite article is often not expressed at all:—\pate dyde unhold mann (an enemy did that); he be stealcode on land swa swa wulf (he stole to land like a wolf). Or it is expressed by sum: on \text{pam lande was sum mann, L\vec{e}ofri\vec{e}\vec{e}h\vec{e}talen (in that country was a man called L.). Or by \vec{a}n, as in Modern English:—\vec{a}n wulf wearp \vec{a} send t\vec{o} be werienne \text{pat h\vec{e}afod wif p\vec{a}\vec{o}ptru d\vec{e}or (a wolf was sent to protect the head against the other wild beasts).

PRONOUNS.

Hwat is used interrogatively of persons where we should use 'who':—hē nyste hwat hīc wāron (he did not know who they were).

VERBS.

NUMBER.

After <u>alc</u> <u>para</u> <u>pe</u> (each of-those-who) the verb is put in the sing, agreeing not with <u>para</u> <u>pe</u> but with <u>alc</u>:—<u>alc</u> <u>para</u> <u>pe</u> <u>pas</u> <u>mīn</u> <u>word</u> <u>ge</u> <u>hīer</u> <u>p</u> (each of those who hear these my words).

When *bæt* or *bis* is connected with a plural predicate by means of the verb 'to be,' the verb is put in the plural:—*bæt wæron þā ærestan scipu Deniscra manna þe Angel-cynnes land gesöhton* (those were the first ships of Danish men which came to the land of the English race).

Impersonal verbs take an accusative of the person, sometimes also with a genitive of the thing.

Others, such as *bynian* (appear), take a dative of the person:—wæs him ge puht bæt hie be hydden bæt heafod (they thought they (the Danes) had hidden the head).

TENSES.

There being no future inflection in Old E., the present is used instead:—ne ārbūhh nāfre Eādmund Hinguare (Edmund will never submit to H.); gā ģē on mīnne wīnģeard, and ic selle ēow þæt riht bih (go ye into my vineyard, and I will give you what is right). As we see in this example, there is a tendency to use bēon in a future sense. Another example is ģif ic bēo ģebunden mid seofon rāpum, sōna ic bēo ģerwield (if I am bound with seven ropes, I shall at once be overcome). The future is sometimes expressed by will and shall, as in Modern English, though generally with a sense of volition with the one, and of necessity with the other, the idea of simple futurity coming out most clearly in the preterites wolde and scolde:—

He gelæhte ane leon pe hine abitan wolde (he seized a lion

that was going to devour him); hie wendon hat hie scolden mare on fon (they expected to receive more).

The preterite has the meaning of the modern

- (1) Preterite and impersect:—se sawere ut eode his sad to sawenne, and ha ha ha seow.. (the sower went out to sow his seed, and while he was sowing..).
- (2) Perfect:—hēr is mīn enapa, hone ic ģetēas (here is my servant, whom I have chosen);—ūre cyning cōm nū hēr tō lande (our king has just landed here).
- (3) Plupersect:— pā pā ge comon pe ymb pā endlystan tīd comon (when those came who had come at the eleventh hour).

Periphrastic tenses are sometimes formed, as in Modern E., by habbe and hafde with the past participles, and often have the meanings of the modern perfect and pluperfect respectively, as in nũ ic habbe gestriened öpru twã pund (now I have gained two other pounds), but even the pluperfect often has the sense of a simple preterite. The participle is undeclinable in the later language, but originally it was declined, being really an adjective in apposition to the noun or pronoun governed by habban: hie hafdon hiera cyning ã vorpenne (they had deposed their king).

The pluperfect sense is often indicated by the addition of the adverb $\bar{\alpha}r$ (before):—his sweora, he $\bar{\alpha}r$ was for slagen (his neck, which had been cut through).

The periphrastic forms of intransitive verbs are formed with wesan:—<u>sippan hie ārfarene wāron</u> (after they had gone away). Here the participle always agrees with the noun or pronoun with which it is connected.

The periphrases with the present participle have no distinctive meanings of duration, &c.:—ān mann was eardiende on Israhēla þēode, Manuē ge hāten (a man dwelt in Israel called Manue).

PASSIVE.

The passive is formed with wesan or weerpan with the past participle. These forms are very vague in meaning, and the distinction between the two auxiliaries is not clearly marked, but wesan appears to indicate a state, weerpan an action.

wearh gerlufod is generally preterite or perfect in meaning: ān wulf wearh ārsend (a wolf was sent); mīne lēofe þegnas, he on hiera beddum wurdon of slægene (my beloved thanes, who have been killed in their beds).

wæs gerlufod, indicating a state, is naturally pluperfect in meaning:—se ærendraca sægde his hlāforde hū him ge andwyrd wæs (the messenger told his lord how he had been answered).

SUBJUNCTIVE.

The subjunctive states something not as a fact, as in the indicative, but merely as an object of thought. Hence it is used to express wish, conditions, doubt, &c.

A. In principal sentences.

Wish and command (often nearly equivalent to the imperative):— pas him sie wulder and lof ā būtan ende (therefore let there be to him praise and glory ever without end); ne hē ealu ne drince nāfrē oppe wīn (nor shall he ever drink ale or wine).

B. In dependent sentences.

The chief cases are the following:-

(1) In indirect narrative and question: seo cwen sægde þæt hiere nære be healfum dæle ge sægd be Salomones mærþo (the queen said that she had not been told about Solomon's glory by half); ic āsciģe hwær seo offrung see (I ask where the offering is); menn woldon seeawian hū hē læge (men

wished to see how he lay). When the statement in the indirect narration is perfectly certain in itself, and not merely accepted on the authority of the speaker, it is put in the indicative:—hē hiere sæġde on hwæm his miht wæs (he told her what his strength consisted in).

- (2) After verbs of desiring and commanding:
- bes ic gewilnige and gewysce mid mode hat ic and ne belife after minum leofum hegnum (that I desire and wish with heart that I may not remain alone after my dear thanes).
 - (3) To express purpose:— by læs ge hone hwæle a wyrt-walien (lest ye root up the wheat);— Dryhten as tag niher, to bæm hæl he ge sawe ha burg (the Lord descended, in order that he might see the city).
 - (4) To express result:— $p\bar{u}$ næfst $p\bar{a}$ milite pæt $p\bar{u}$ mæge him wip standan (thou hast not the power that thou canst withstand him).
 - (5) To express hypothetical comparison (as if):—se woulf folgode for mid pam heafde, swelce he tam ware (the wolf followed on with the head, as if he were tame); he gerlähte ane leon, and torbrægd hie to styctum, swelce he tortære ticten (he seized a lion and tore her to pieces, as if he were rending a kid).
 - (6) In conditional clauses, generally with gif or būtan, and in concessive clauses with pēah, pēah pe:—God wāt pæt ic nyle ā būgan fram his bīgengum āfre, swelte ic, libbe ic (God knows that I will not swerve from his worship ever, whether I die or live); pās flotmenn cumap, and pē cwicne ģe bindap, būtan pū mid flēame pīnum fēore ģe beorge (these pirates will come and bind thee alive, unless thou savest thy life with flight); God hielt Ēadmund hālne his līchaman op pone miclan dæģ, pēah pe hē on moldan cōme (God will keep Edmund

with his body whole until the great day, although he has come to earth—been buried). Sometimes the idea of 'if' must be got from the context:—clipiap to pissum gieftum swa hwelce swa ge gemēlen (summon to this wedding whomsoever ye meet,—if ye meet any one); hie behēlon hiere sceattas wip pām pe hēo be swice Samson (they promised her money in consideration of her betraying Samson,—if she would..).

When the statement is assumed as unreal, instead of merely hypothetical, as in the above instances, both clauses are put in the subjunctive, the preterite being substituted for the present, as in Modern English also, where if I were.. implies I am not.. The modern distinction between if I were and if I had been, the former corresponding to the present indicative I am not, the latter to the preterite I was not, is not made in Old English, which uses gif ic ware in both instances. Sometimes the 'if'-clause has to be supplied in thought:—mē lēofre ware þæt ic on gefeohte feolle wib i þām þe mīn folc moste hiera eardes brūcan (I would rather fall in fight that my people might possess their country), where we must supply some such clause as gif hit swā bēon mihle (if it might be so—if it were possible to save my people by my death).

- (7) In clauses dependant on a negative sentence:—nis nān ping pe his mihte wip stande (there is nothing that resists his might). Sometimes the negation must be gathered from the context, as in se hālga is mārra ponne menn mæġen ā smēan (the saint is more illustrious than men can conceive = the saint is so illustrious that no men can conceive it).
- (8) In other cases, to express uncertainty, futurity, &c.: \$\bar{p}\tilde{n} r\tilde{c}\tilde{e} \tilde{e} wift fram \$\bar{p}\tilde{e}\$, of \$\bar{p}\tilde{w}\$ wite \$\bar{p}\tilde{w}\$ God \$\tilde{e}\$ ewill manna \$r\tilde{c}\tilde{e}\$ (thy kingdom shal depart from thee, till thou knowest that God rules the kingdoms of men); uson

weorpian ürne naman, ær þæm þe wē sien to dælde geond calle eorpan! (let us make our name famous, before we are dispersed over the earth).

The preterite subjunctive is often expressed by should and awould with an infinitive, as in Modern English.

Scolde is used after verbs of desiring, requesting and commanding:—biddende pone Ælmihtigan þæt hē him ārian scolde (praying the Almighty to have mercy on him). In the following example the verb of commanding is understood from the noun ærende:—hē sende tō þæm cyninge bēotlic ærende, þæt hē ābūgan scolde tō his mannrædenne, ģif hē his fēorcs rōhte (he sent to the king an arrogant message, that he was to turn to his allegiance, if he cared about his life).

Wolde is used after verbs of purpose:—se cyning ëode inn pæt he wolde ge sëon pā pe pær sæton (the king went in to see those who were sitting there).

INFINITIVE.

After verbs of commanding the infinitive often seems to have a passive sense:—hīe hēton him sendan māran fullum (they ordered that more forces should be sent to them). So also after verbs of hearing, &c.:—hæt mæste wæl þe wē setgan hīerdön (the greatest slaughter we have heard told of). In such cases an indefinite pronoun has been omitted: 'ordered them to send..' etc.

GERUND.

The gerund is used-

- (1) to express purpose:—ūt ēode se sāwere his sād tō sā-wenne (the sower went forth to sow his seed).
- (2) it defines or determines an adjective (adverb or noun): hit is scandlic ymb swelc to sprecenne (it is shameful to speak of such things).

PREPOSITIONS.

Some prepositions govern the accusative, such as *burh* (through), *symbe* (about); some the dative (and instrumental), such as *after* (after), $\tilde{\alpha}r$ (before), αt (at), δe (by), $\delta innan$ (within), $\delta \tilde{u} lan$ (without), for (for), fram (from), of (of), $t\tilde{o}$ (to).

Some govern both accusative and dative, such as ofer (over), on (on, in), under (under). The general rule is that when motion is implied they take the accusative, when rest is implied, the dative. Thus on with the accusative signifies 'into,' with the dative 'in.' But this rule is not strictly followed, and we often find the accusative used with verbs of rest, as in hē his hūs getimbrode ofer stān (he built his house on a rock), and conversely, the dative with verbs of motion, as in hīe fēollon on stānihte (they fell on stony ground).

As regards the use and meaning of the prepositions, it must be noticed that *in* is very seldom used, its place being supplied by *on*, the meaning 'on' being in its turn often expressed by *ofer*, as in the passage just quoted.

When a thing is referred to, $p\bar{c}r$ is substituted for hit, the preposition being joined on to the $p\bar{c}r$, so that, for instance, $p\bar{c}r$ -to corresponds to to him; hie laddon hone cyning to anum treowe, and freedon hine $p\bar{c}r$ -to (they led the king to a tree, and tied him to it). So also $h\bar{c}r$ -becastan is equivalent to east of this (country).

Prepositions sometimes follow, instead of preceding the words they modify, sometimes with other words intervening: hie scuton mid gafelocum him tō (they shot at him with missiles); hie cwādon him betwēonan (they said among themselves); hām Ælmihtigan tō lofe, he hīe on gertiefdon (to the praise of the Almighty, in whom they believed), where on

refers to the indeclinable be. So also in bæt hūs be hē inne wunode (the house he dwelt in).

Where the noun modified by such a preposition is not expressed, the preposition becomes an adverb: se cyning sende his here tō, and for dyde pā mannslagan (the king sent his army to the place, and destroyed the murderers).

NEGATION. '

CORRELATION.

Correlation is often more fully expressed in Old than in Modern English, as in $b\bar{a}$ $b\bar{a}$ menn slepon, $b\bar{a}$ com his feorda sum='when the men slept, then came one of his enemies.' In $b\bar{a}$ $b\bar{a}$ ='when' the two correlatives are brought immediately together:— $b\bar{a}$ $b\bar{a}$ hē seow, sumu hēe feollon wib weg='then when he sowed, some of them fell by the road.' In the following example the conjunction bat is correlative with the pronoun bat:—bas ic gerwilnige bat ic and ne be life after minum leofum begnum—'that I desire, that I may not remain alone after my dear thanes.' Sometimes a word is used to include both the demonstrative and the relative meaning:—hē ģe brohte hine bar hē hine ær ģenam (he brought him to the place where he took him from).

WORD-ORDER.

The Old English word-order resembles that of German in many respects, though it is not so strict, thus:—

The verb comes before its nominative when the sentence is headed by an adverb or adverbial group, or when the object or predicate is put at the head of the sentence:—\(\bar{p}\bar{a}\) cvva\(\bar{p}\) se cyning (then said the king); \(\bar{a}\) rest vv\(\bar{a}\) ro b\(\bar{u}\) and bisses landes Brettas (at first the Britons were the inhabitants of this country); on his dagum c\(\bar{o}\)mon \(\bar{a}\)rest b\(\bar{a}\)ron olfendas (camels carried it); m\(\bar{a}\)re is se God \(\beta\)e Dani\(\bar{e}\) on belief\(\beta\) (great is the God that Daniel believes in).

The infinite often comes at the end of the sentence; $w\bar{e}$ magon $\bar{e}ow$ $r\bar{e}d$ $\hat{g}el\bar{e}ran$ (we can teach you a plan).

The finite verb often comes at the end in dependant sentences, an auxiliary verb often coming after an infinitive or participle; but waron ba arestan stipu Deniscra manna be Angel-comes land gesoluton (those were the first ships of Danish men which came to the land of the English race); but maste wal be we seegan hierdon of bisne andweardan dag (the greatest slaughter that we have heard tell of up to this present day); but hie pone Godes mann abitan scolden (in order that they should devour the man of God).

There is a tendency to put the verb at the end in principal sentences also, or, at least, to bring it near the end: hiene man of slog (they killed him); hie har sige namon (they got the victory there).

1. 63. pæm, those.

hider on land, lit. hither on to land, = to this land.

1. 74. bletsian. The older form of this word is bledsian. It is a derivative of blod, like ricsian from rice, with mutation of the root vowel. Its original meaning was to 'sprinkle with blood,' and hence, in heathen times, to 'consecrate,' especially to consecrate an altar by sprinkling it with the blood of the victim.

1. So. godspell. The original form of this word was probably godspell='good tidings,' a literal translation of the Greek enaggélion.

Afterwards the first vowel was shortened before the following consonantgroup, or else *god* was directly substituted for *god*, as giving a more evident meaning, the result being that the word was taken in the sense of 'God's tidings.' In this form it was adopted into Icelandic (guðspiall) and Old High German (gotespel), having been introduced by the Old English missionaries.

II. FROM THE GOSPEL OF ST. MATTHEW.

- 1. 1. pās mīn word. Gr. 43. 8.
- 1, 16. aweorpe. Gr. 49. (8).
- l. 20. hit refers back to sad, l. 18.
- l. 22. up sprungenre sunnan. Gr. 41. 2.
- 1. 28. is geworden. An over-literal rendering of the Latin factum est.
- I. 32. hine, reflexive, Gr. 19.
- 1. 40. tō forbærnenne. We see here how out of the active 'in order to burn it' may be developed the passive 'in order that it may be burnt,' as in the modern E. 'a house to let.' Compare Gr. 50. 4, (1).
 - 1. 52. on hiera fatu. Compare I. 137.
- 1. 60. ģewordenre ģecwidrædenne pæm wyrhtum. A very stiff adaptation of the ablative absolute of the original, 'conventione autem facta cum operariis.' pæm wyrhtum is to be taken as a dative of the person affected (Gr. 41).
- 1. 67. dyde pæm swā ģelīce. The Latin has simply 'fecit similiter.' The sense is 'did like to it' (like his former proceeding), the swā being pleonastic.
 - 1. 86. pæt. Gr. 21.
 - I. 90. suna, dative, 'for his son.'
- 1. 106. ģiefthūs. hūs must here be taken in the sense of 'hall,' 'chamber.' In Icelandic the plural hūs is regularly used to denote the group of buildings (often detached) constituting a house or homestead, the kitchen, for instance, which was originally detached, being still called eldhūs (fire-house).
- 1. 107. pæt he wolde geseon. This clause is due to a confusion of two constructions, (1) he wolde geseon, (2) pat (in order that) he gersewe.

III. OLD TESTAMENT PIECES.

The first two pieces are taken from Ælfric's translation of the Heptateuch, first published by Thwaites in his Heptateuchus, and afterwards by Grein as vol., i. of his Bibliothek der angelsächsischen Prosa—Genesis xi. and xxii. The other three are from Ælfric's Homilies (edited by Thorpe)—ii. 584 foll., i. 570, ii. 432.

- 1. 4. him betwēonan. Gr. 51. 5.
- 1. 13. læden. This word is the Latin latina (=lingua latina) used first in the sense of 'Latin language,' then of language generally.

- I. 17. for pem . . for pem pe, correlative, the first demonstrative, the second relative.
- 1. 28. tō scoldon. This use of steal with a verb of motion understood is very common.
- 1. 36. him self. him is the reflexive dative of interest referring to Gad—literally, 'God him-self will appoint for him self.' In such constructions we see the origin of the modern himself, themselves.
- 11. 46, 47. nū. nū, correlative, = now . now that, the second ni being almost causal (since).
 - l. 51. hæfde . . tō, took . . for.
 - 1. 52. Gode to lace. Gr. 40. (1).
 - 1. 57. min ege, objective genitive, 'the fear of me.'

mare, neut. 'a greater thing,' 'something more important.'

1. 81. mare. Cp. 1. 57.

I. 82. wære. Gr. 49. (7).

- 1. 89. hwees is governed by giernde, by 'attraction.'
- l. 135. mičle, adverb.
- I. 137. wære. Gr. 49. (7).
- I. 153. beliefan is a later form for geliefan.
- l. 156. tō handum. Cp. l. 122 above.
- 1. 174. ær genam. Gr. 46. 6.
- 1. 200. fram mannum. fram here, as usual, denotes the agent 'by' in passive constructions.

1. 202. wite. Compare Gr. 48. (3) and 49. (8).

IV. SAMSON.

From Ælfric's translation of the Book of Judges in Thwaites' Heptateuch.

- I. 8. onginp to aliesenne, will release. onginnan is often used pleonastically in this way.
- 1. 35. Gaza gehäten. When a name together with gehäten is put in apposition to another noun it is left undeclined, contrary to the general principle (Gr. 42. 6).
 - l. 41. swā swā hie belocenu wæron, locked as they were.

ufeweardum pam onolle. Gr. 43. 2.

- 1. 46. was, consisted.
- 1. 51. geworhte. We should expect geworhtum (Gr. 42. 5). Perhaps the nom. is due to confusion with the construction with a relative clause—pe of sinum geworhte sind.

- l. 74. Dagon gehaten. Compare l. 35.
- swelce, 'on the ground that'-' because (as they said).'
- 1. Sr. heton. Compare I. 106.
- 1. 87. forp is often used pleonastically in this way with mid.

V. FROM THE CHRONICLE.

1. 2. hēr sind, there are here. hēr is here used analogously to pær, as in II. 3 and the modern E. there are. Cp. also 1. 12 below.

gepeodu, languages as the test of nationality. It is believed that Latin was still spoken as a living language by the Romanized Britons at the time of the venerable Bede (eighth century), from whose Church History this section was taken by the compilers of the Chronicle.

- 1. 5. Armenia is an error for Armerica.
- 1. 6. Scithie, Scythia.
- 1. 8. Norbibernie, North of Ireland.
- 1. 24. hēr, at this date—at this place in the series of entries which constitute the Chronicle.
- 1. 26. Wyrtgeorn is the regular development of an earlier *Wurtigern from the British Vortigern.
 - 1. 28. Ypwinesfleot has not been identified; some say Ebbsfleet.
 - 1. 45. Æglesprep, Aylesthorpe, a village near Aylesford.
 - 1. 49. Crecganford, Crayford.
- 1. 52. The diction of this passage, with its alliteration and simile, shows that it is taken from some old poem.
 - l. 61. hwpne menn, Danes.
- 1. 62. mid Defena-sorre, literally 'together with Devonshire,' that is 'with a force of Devonshire men.'
- 1. 64. dux is here written instead of caldormann. So also we find rex for cyning.
 - 1. 65. Sandwic, Sandwich.
- 1.68. feorpe healf hund, fourth half=three and a half. This is the regular way of expressing fractional numbers, as in the German viertehalb.
 - 1. 71. Süprige, Surrey.
 - 1. 73. Aclea, Ockley.
- 1. 76. so here, the Danish army. here got a bad sense, through its association with hergian (to harry), and hence is applied only to a plundering, marauding body of men. In the Laws here is defined as

a gang of thieves more than thirty-five in number. The national English army (militia) is called feerd, l. 71, 3 above.

Humbremups, mouth of the Humber.

1. 77. Eoforwie, York; a corruption of Eboracum.

1. 84. inne wurden, get in.

1. 85. sume. Compare IV. 51.

VI. KING EDMUND.

From Ælfric's Lives of the Saints, now in course of publication for the Early English Text Society by Prof. Skeat. The present life has been printed only by Thorpe, in his *Analecta Anglosaxonica* from a very late MS. It is here given from the older MS., Cott. Jul. E. 7.

It will be observed that the present piece is in alliterative prose, that is, with the letter-rime of poetry, but without its metrical form. The alliteration is easily discernible:—com supan ofer sæ fram sancte Benedictes stowe; dæge, to Dunstane, &c.

1. 1. sancte is an English modification of the Latin genitive sancti.

1. 5. sancte is here the E. dative inflection, sanct having been made into a substantive.

1. 39. bilewit=*bile-hwit (with the regular change of hw into w between vowels) literally 'white (=tender) of bill,' originally, no doubt, applied to young birds, and then used metaphorically in the sense of 'gentle,' 'simple.'

1. 70. worhte fleames. This construction of wyrcan with a genitive is frequent.

1. 76. wære, subj. Gr. 48. (6).

1. 85. fuse. The correct reading is probably fuse, but the plural fuse may be taken to refer to Hinguar and his men collectively.

1. 149. gebedhus. The Welsh bettws, as in Bettws-y-coed = chapel in the wood, still preserves the O. E. form nearly unchanged.

I. 176. swa past does not denote result here, but is explanatory—'namely by being bound. . .'

1. 178. hie, reflexive.

1. 179. pæs . . hū, correlative.

I. 185. The reference is apparently to Proverbs xxiv. 11, which (in the Vulgate) runs thus: 'Erue eos qui ducuntur ad mortem.'

1. 200. hwæper, (that he might see) whether . . .

1. 215. lichaman, instrumental dative (Gr. 41) of defining.

1. 222. Elig = @l-iep 'eel-island.'

GLOSSARY.
